**SOMEWEAR**

Communicate. Track. Protect

Reliable and effective satellite communication for forward-looking operations. Oversee remote operations, heighten offline team communications, and ensure the safety of personnel.

Hardware

- Endurance: 1000+ messages
- Battery: 10+ days on 10min tracking
- Size: 3" x 3.6" x 0.8"
- Weight: 4oz
- Encryption: AES 256
- Water/Impact: IP68/MIL-STD-810
- Satellite: Iridium NEXT
- GPS: CEP 50<2.5m

Software (Web + Mobile)

- Smart Routing – app automatically toggles between cell/wifi/sat
- Admin web app to monitor and engage with your remote workforce
- Adjustable location reporting interval (15 sec)
- Cellular tracking allows non-hotspot users to manage and send location data
- Integrated solutions (i.e. ATAK, onX, and more)

01 ### 100% Global Coverage in 4oz

Somewear's compact satellite hotspot and software platform give remote personnel reliable situational awareness (e.g. tracking, messaging, asset awareness, SOS) globally across small and large scale operations.

02 ### Proven Enterprise Solution

Our technology is trusted by some of the most elite teams and organizations in the world. Somewear is proud to support helicopter paramedics, wildland firefighters, security teams, US Special Forces operators, and more.
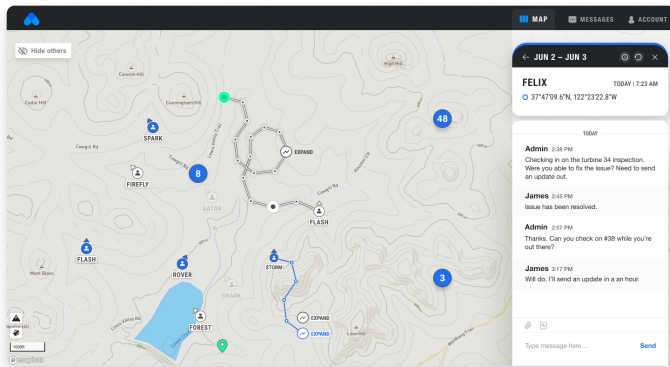

03 ### Emergency Response

Customize the SOS experience and route it to the desired emergency response management systems — GEOS Worldwide or an internal organization response team.
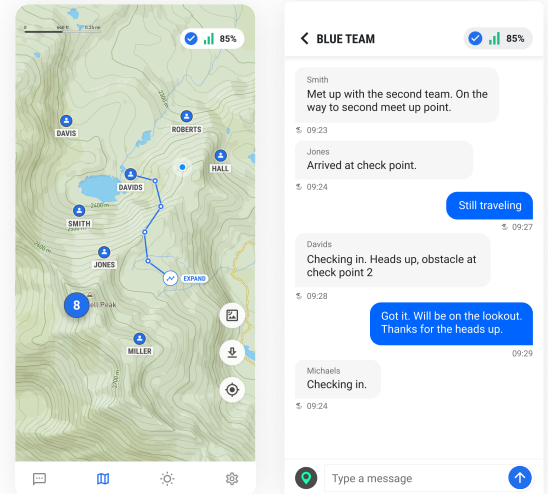

04 ### Scalable Team Management

Workspaces allow organizations to structure their team's communications and operations in a secure way that matches their internal architecture. Somewear enables organizations to manage multiple Workspaces concurrently.

Software solutions

Command Center

Teams can remotely monitor and manage operations with a birds-eye-view of their workforce and resources. Track personnel and assets in real-time, communicate critical information seamlessly, monitor human performance metrics, and maximize operational efficiency.

Mobile

The app pairs with a Somewear hotspot and empowers remote personnel to easily communicate and make quick, informed decisions on the job. Personnel has access to two-way messaging, real-time location tracking, on-demand weather reports, and SOS functionality.

Additional Capabilities

Admin

Admin view gives real time visibility of all remote assets and an immediate line to triage.

Filtering is enabled for live and historical data to aid admin with specific tasking.

Over the Air

Over-the-air settings give admins the ability to remotely change the status of a remote hotspot from the comfort of their office (e.g. change tracking interval, shut off tracking)

Admins can also view stats and data like battery life remotely.

Developer SDKs

Somewear has developer friendly SDKs for integration with 3rd Party Applications.

Sensor Integrations

Somewear integrates with human performance sensors to display biometric data and with remote sensors and equipment to relay critical information.
